योग: कर्मसु कौशलम्

Python Programming - 2301CS404

Lab - 14

Roll No : 495

Name : Dhruv Kakkad

Enrollment : 24031701022

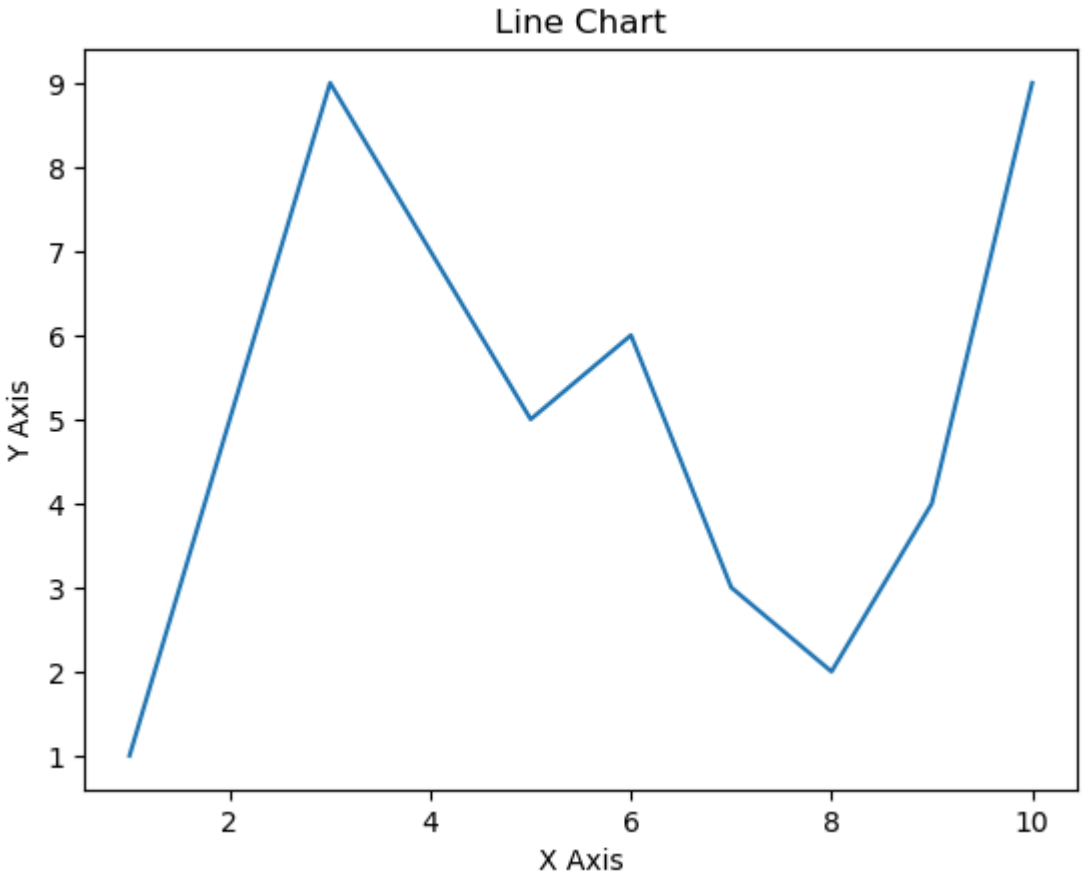
Import matplotlib below

In [41]:
```
import matplotlib.pyplot as plt
```

01) WAP to display the line chart for given data for x and y axis.

In [4]:
```
x = range(1,11)
y = [1,5,9,7,5,6,3,2,4,9]
```

In [5]:
```
plt.plot(x, y)
plt.title("Line Chart")
plt.xlabel("X Axis")
plt.ylabel("Y Axis")
plt.show()
```

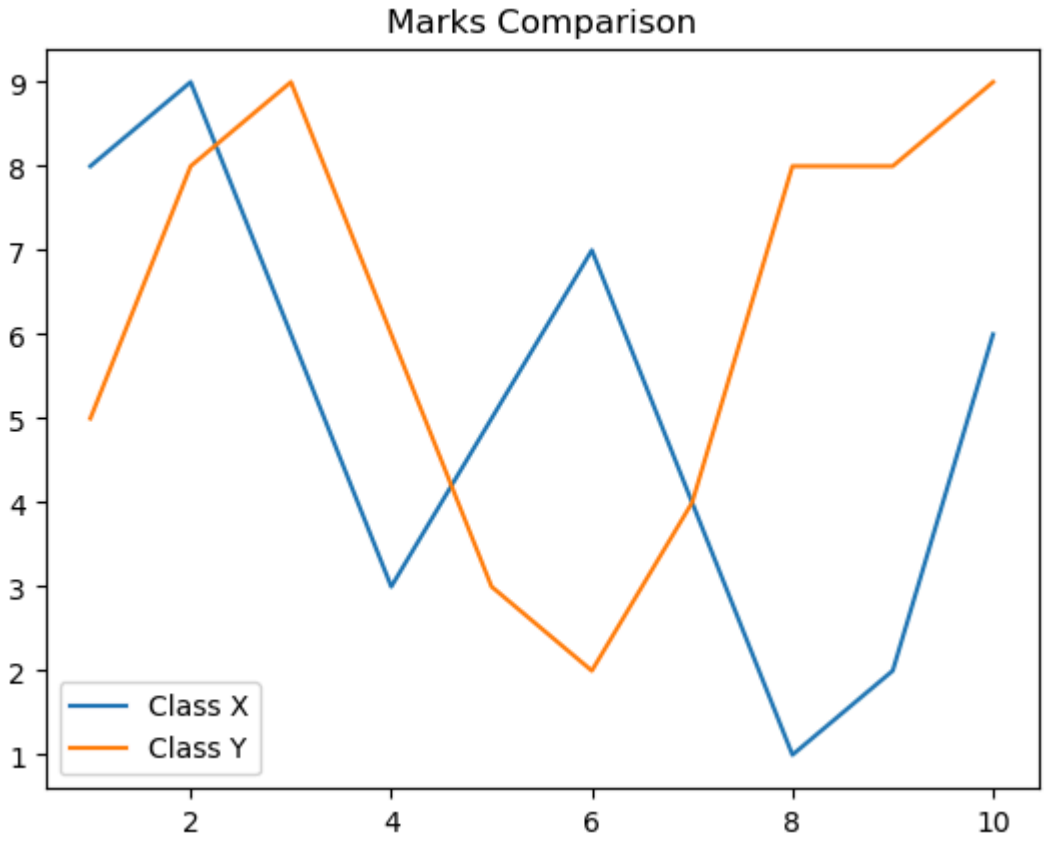


02) WAP to generate line chart for given data.

In [6]:
```
x = range(1,11,1)
cxMarks= [8,9,6,3,5,7,4,1,2,6]
cyMarks= [5,8,9,6,3,2,4,8,8,9]
```

In [7]:
```
plt.plot(x, cxMarks, label="Class X")
plt.plot(x, cyMarks, label="Class Y")

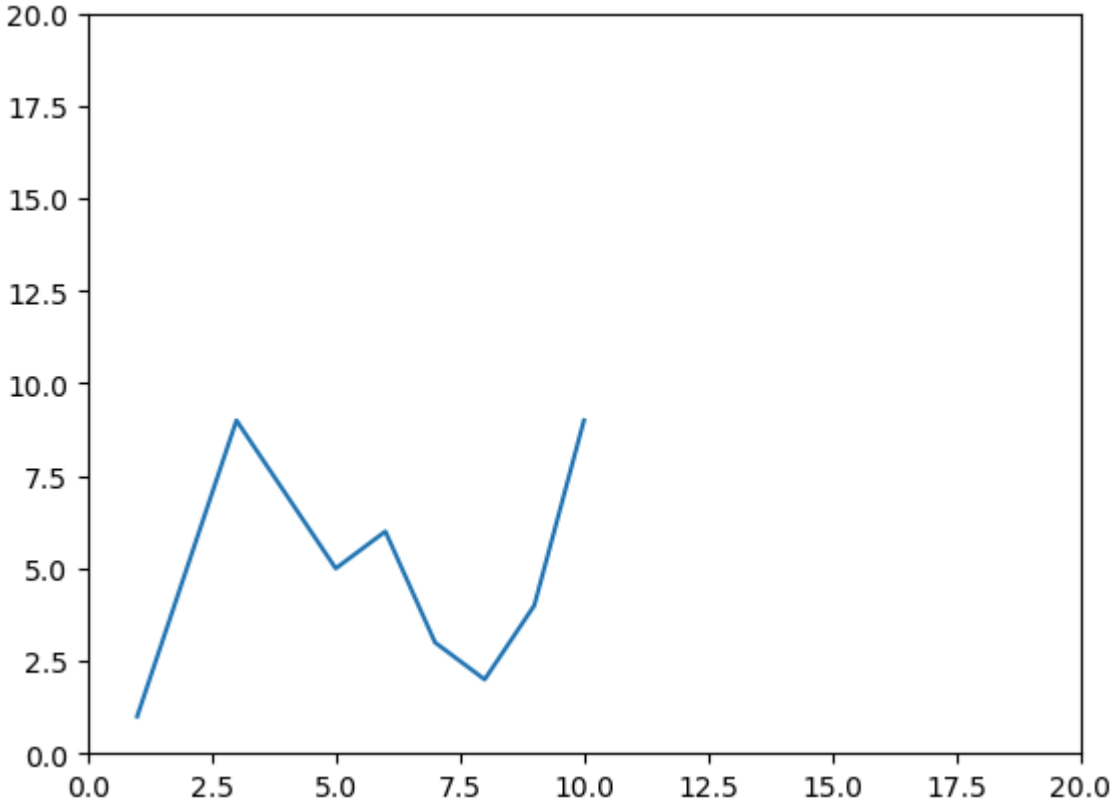
plt.legend()
plt.title("Marks Comparison")
plt.show()
```



03) WAP to generate line chart for given data, but create your custom axis.

In [8]:
```
x = range(1,11)
y = [1,5,9,7,5,6,3,2,4,9]
```

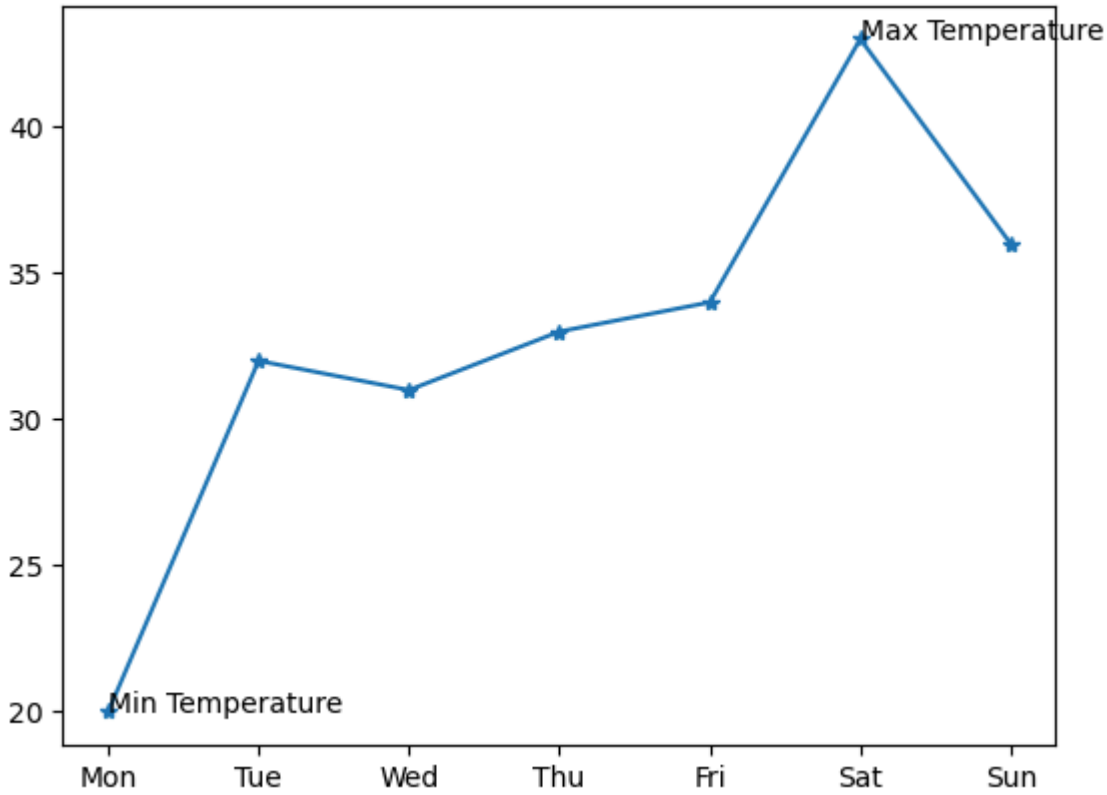
In [21]:
```
ax = plt.axes()
ax.set_xlim([0,20])
ax.set_ylim([0,20])
plt.plot(x,y)
plt.show()
```



04) WAP to plot a line chart showing temperature variation during a week. Mark the lowest and highest temperatue.

In [14]:
```
Days = ["Mon", "Tue", "Wed", "Thu", "Fri", "Sat", "Sun"]
Temperature = [20, 32, 31, 33, 34, 43, 36]
```

In [30]:
```
plt.plot(Days , Temperature , marker="*")
plt.annotate("Max Temperature" , xy=(Days[Temperature.index(max(Temperature))],m
plt.annotate("Min Temperature" , xy=(Days[Temperature.index(min(Temperature))],m
plt.show()
```

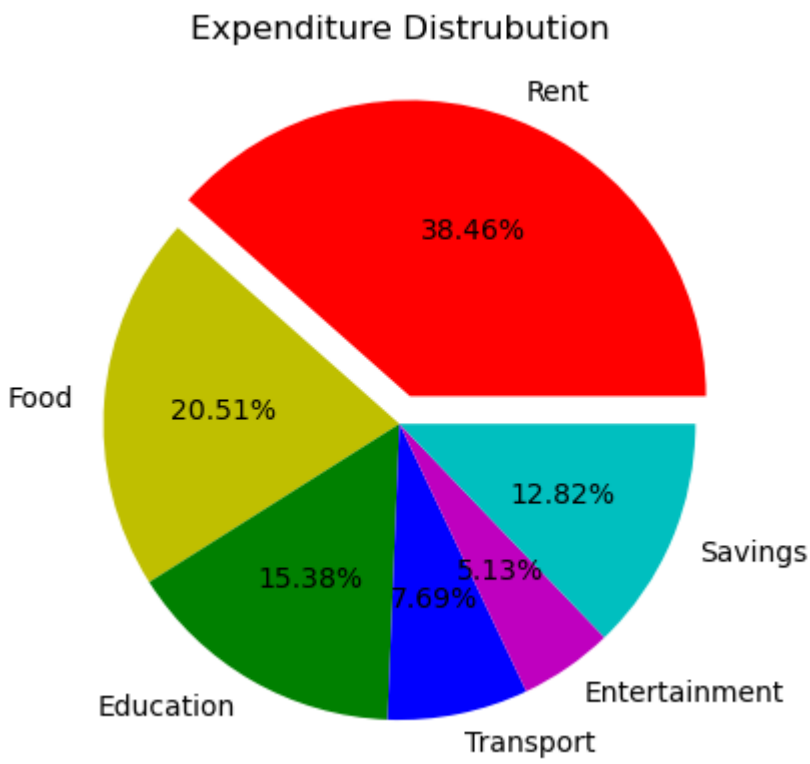


05) WAP to create a detailed pie chart representing the monthly expenditure distribution of a family.

The chart should display labels, percentage values, title, different colors for each slice, and explode one slice to highlight the highest expense.

In [42]:
```
Categories = ["Rent", "Food", "Education", "Transport", "Entertainment", "Saving
Amount= [15000, 8000, 6000, 3000, 2000, 5000]
```

In [50]:
```
color = ["r","y","g","b","m","c"]
plt.pie(Amount , labels=Categories , colors = color ,autopct = "%1.2f%%", explod
plt.title("Expenditure Distrubution")
plt.show()
```

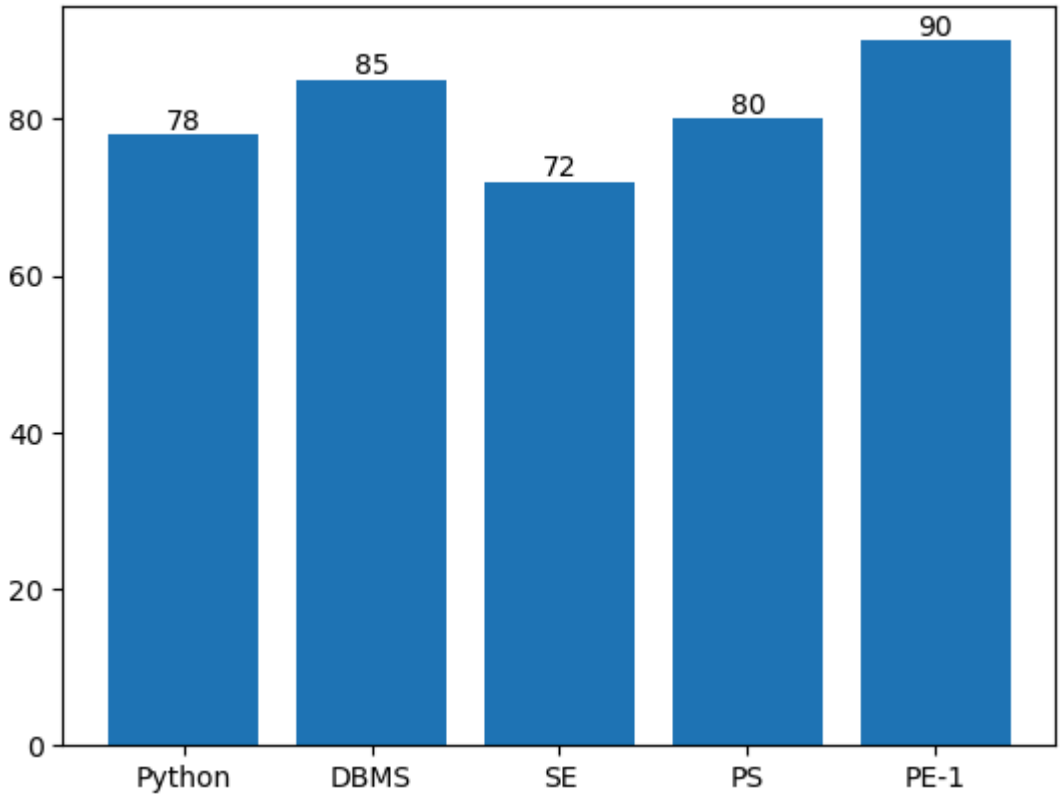


06) WAP to create bar chart showing the marks obtained by students in different subjects.

The program should also display the marks on the top of the respective bar.

In [53]:
```
Subjects = ["Python", "DBMS", "SE", "PS", "PE-1"]
Marks = [78, 85, 72, 80, 90]
```

In [56]:
```
bars = plt.bar(Subjects , Marks )
plt.bar_label(bars)
plt.show()
```

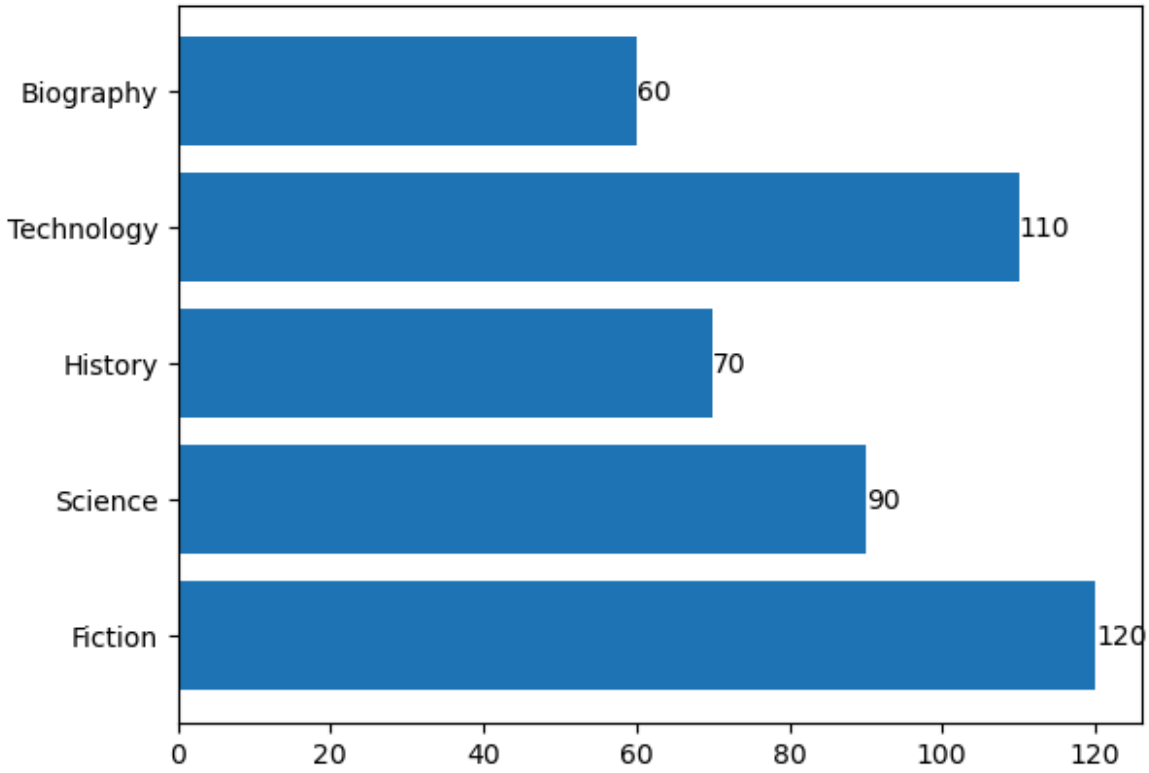


07) WAP to create a horizontal bar chart representing the number of books sold in different categories.

The program should also display the number of books sold at the end of the respective bar.

In [58]:
```
Categories = ["Fiction", "Science", "History", "Technology", "Biography"]
Books_Sold= [120, 90, 70, 110, 60]
```

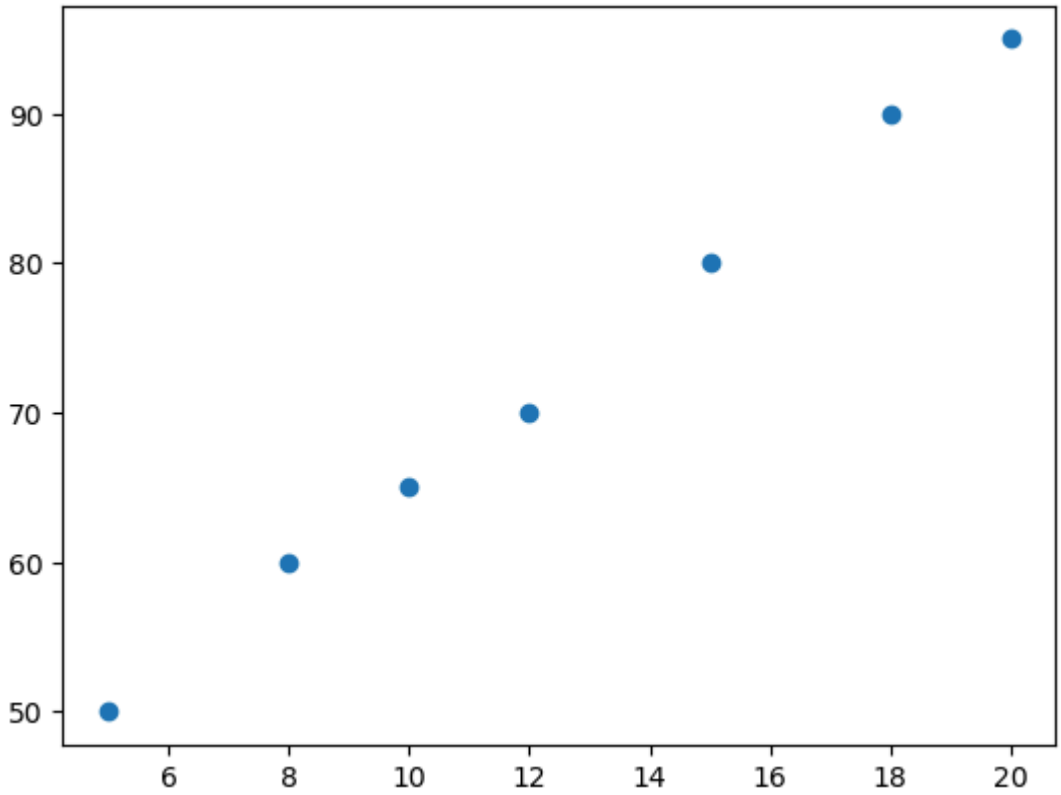
In [60]:
```
bars = plt.barh(Categories ,  Books_Sold)
plt.bar_label(bars)
plt.show()
```



08) WAP to create a scatter plot representing the relationship between advertising expenditure and sales revenue of a company.

In [62]:
```
Advertising_Cost = [5, 8, 10, 12, 15, 18, 20]
Sales_Revenue= [50, 60, 65, 70, 80, 90, 95]
```

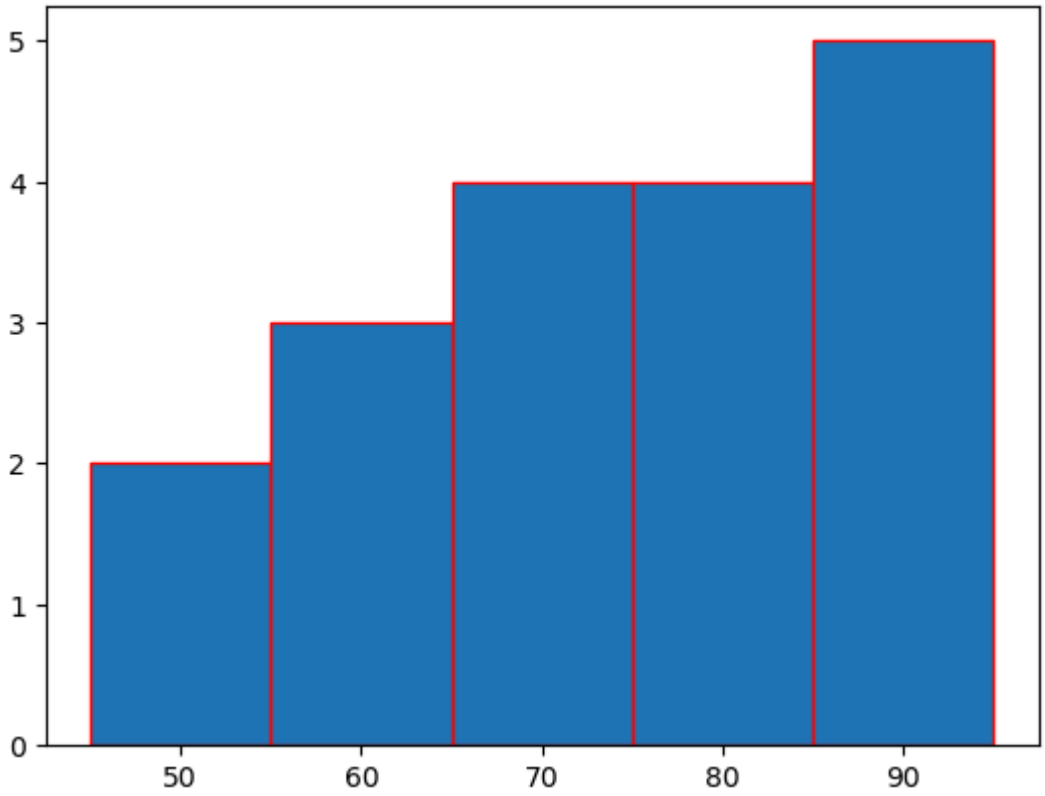
In [65]:
```
plt.scatter(Advertising_Cost , Sales_Revenue )
plt.show()
```



09) WAP to create a histogram representing the distribution of marks obtained by students in a class.

In [66]:
```
Marks = [45, 50, 55, 60, 62, 65, 68, 70, 72, 75, 78, 80, 82, 85, 88, 90, 92, 95]
```

In [69]:
```
plt.hist(Marks , bins = 5 , edgecolor ="r")
plt.show()
```



10) WAP to create a box plot representing the distribution of daily commuting time (in minutes) of employees and identify outliers (if any).

In [71]:
```
Commuting_Time= [5, 18, 20, 22, 25, 27, 28, 30, 32, 35, 38, 40, 42, 90]
```

In [72]:
```
plt.boxplot(Commuting_Time,notch=True)
plt.show()
plt.boxplot(Commuting_Time,notch=False)
plt.show()
```
